EXPERIENCE

Software Engineer | Optimizely | May 2024 – Aug 2025

Optimizely is an enterprise SaaS platform serving Fortune 500 companies. I was on the Content Marketing Platform and Digital Asset Management teams.

- Shipped the custom URL feature for assets - contributed to AWS CloudFront, Lambda@Edge, and DynamoDB infrastructure on a system handling **~1M requests/day** and wrote supporting documentation for long-term maintenance.
- Resolved multiple high-priority, SLA-bound production issues, saving the company **~\$10,000** on each issue through cross-team collaboration using OpenSearch, AWS CloudWatch, Kubernetes.
- Implemented and handled production issues for multiple features including user calendar, secure asset collection sharing, dynamic forms, and data reporting, driving user retention.
- Led testing for the data reporting feature by writing tests for **3 different services**, achieving over **80% code coverage**, allowing it to go into maintenance mode.
- Collaborated with external product teams to roll out product analytics which generates **5,000 events/month** to track user behaviour.

Software Engineer | GoZayaan | Dec 2022 – Mar 2024

GoZayaan is one of the largest online travel agencies (OTA) in Bangladesh, with operations in Singapore, Pakistan, and Sri Lanka.

- Developed an in-house SEO web page builder that helped the marketing team push SEO content, resulting in organic Google search traffic increase from **33k to 116k/month (~3.5x)**; built reusable components including tables and an image library, and implemented automatic Google Search markup for SEO and rich search results.
- Contributed to the Vue 2 to Nuxt 2 codebase migration, improving performance and maintainability by optimizing Docker configurations and integrating Vite.
- Delivered key user-facing features such as travel wishlist, support popups, hotel map search, gift cards, and improved booking page, enhancing user engagement.
- Mentored and onboarded new teammates to the codebase, helping them get up to speed.

Software Engineer | Shotero | Feb 2022 – Aug 2022

- Built 1 free tool with a cloud save and share feature.
- Gained hands-on experience with JavaScript, Node.js, Alpine.js, PostgreSQL.

Web Development Intern | YY Ventures | Sep 2021 – Nov 2021

- Developed 4 web landing pages, bringing over **\$2,000 in revenue** with a 2-person team.
- Maintained **3 PHP websites** using GitHub Actions for CI/CD, streamlining the development process.

PROJECTS

Relearnify | TypeScript, React, tRPC, T3 Stack

- A note-taking app leveraging the FSRS Spaced Repetition algorithm to **boost memory retention by 50%**, with an automated review system and daily email reminders to ensure users revisit their notes.
- Built a rich text editor using Tiptap, supporting markdown, video embedding, and flexible formatting.
- Built out asynchronous email flow sending approximately **8 emails/day** using cron jobs.

Multiple Currency Converter | Remix, PWA, Redis

- An **offline-first** PWA using Remix, and service workers enabling full functionality without internet connectivity after initial load
- Implemented a caching layer with Redis to store exchange rates, **reducing 3rd party API calls by 90%** and improving response times.

BDJobs Scraper | Python

- Developed a script using asynchronous Python that scrapes **6,000 job listings** from BDJobs in 10 minutes, an 8x speed increase and optimized memory usage compared to traditional methods.

Article: Full Text Search using Django and Postgres | Django, PostgreSQL

- Wrote a tutorial on implementing **efficient full-text search feature** using Django and PostgreSQL, leveraging SearchVectorField, GIN indexes, and weighted search for enhanced search functionalities.

EDUCATION

BRAC University, BSc in Computer Science and Engineering, CGPA: 3.91 / 4.0

Thesis: Image Processing and Deep Learning/CNN Models using Python, Keras, Tensorflow
